

Domestic Risk Profiling – OSINT Behavioral Markers

Subject: Daughter (Primary), Grandchild (Secondary)

Objective: Identify behavioral patterns suggesting risk to emotional or physical well-being, based on **remote observation**, **digital footprint**, and **communications review**.

This analysis does not confirm abuse, but flags risk conditions warranting further investigation or documentation.

Behavioral Overview

Behavior Type	Observed Actions (OSINT-Detectable)	Risk Level	Pattern Match	Implication
Isolation	Subject has reduced or eliminated online interaction with family, no social posts involving child, avoids calls/messages	High	Seen in coercive control/domestic abuse	May be under pressure to cut off external influence
Partner-Centric Content	All visible activity revolves around partner (photos, mentions, tags); no independent activity or opinions	Medium	Common in manipulated or monitored relationships	Loss of autonomy; may be under psychological control
Emotional Tone Shift	Tone in texts/posts is subdued, cautious, or avoidant; lack of typical emotional range	Medium	Indicators of stress, control, or depression	Suggests emotional suppression or fear
Restricted Child Presence	Child absent from recent media/posts despite previously common appearances	High	Seen in concealment or risk scenarios	Potential issue involving the child — worth deeper look

Behavior Type	Observed Actions (OSINT-Detectable)	Risk Level	Pattern Match	Implication
Sudden Digital Gaps	Deleted accounts, changed phone numbers, wiped message history	 High	Digital obfuscation patterns	Suggests intentional erasure of traceable history
Unverifiable Life Events	New job/location claims without online confirmation (LinkedIn, registry, public listings)	 Medium	Seen in deception or manipulated narrative	Reality may differ from shared version

Recommended OSINT Methods

- **Historical social graph review** (pre-isolation vs now)
- **Digital footprint analysis** (LinkedIn, Facebook, Instagram, job boards, public records)
- **Image metadata review** (timestamps, geolocation if accessible)
- **Contact pattern mapping** (sudden drop in frequency, third-party comments)
- **Cross-checking stated facts** (employment, schooling, healthcare usage)

Indicators to Escalate Surveillance or Welfare Check

- Child appears distressed, injured, or unkempt in any recent images
- Subject shows signs of fear, editing messages, or avoiding eye contact in videos
- Third parties (friends, exes, teachers) express concern
- Evidence of frequent partner presence and monitoring in online activity
- Sudden relocation without notification or contact
